SUMMARY

CS graduate with strong hands-on skills in Python, SQL, and Excel backed by 9 months of professional experience and 6 data and ML projects. Proficient in statistical analysis, data visualisation, and building insight-driven reports. Eager to contribute across software development, data analysis, and technical support in a dynamic tech environment.

TECHNICAL PROFICIENCIES

Languages:	Python, SQL, Java, C
Python Libraries:	Pandas, NumPy, Matplotlib, scikit-learn, NLTK, TensorFlow, Keras
Excel Skills:	VLOOKUP, Pivot Tables, Data Validation, Data Cleaning, Advanced Formulas
Databases:	MySQL, Odoo
Visualisation:	Google Data Studio, Matplotlib (Python)
Analytics Skills:	Statistical Analysis, Data Mining, Reporting, Descriptive Analytics, NLP, CNNs
Tools & Platforms:	Git, GitHub, Google Colab, MS Office Suite

INTERNSHIPS

Hummingbird Innovations LLP — Software Developer Intern Jun 2024 – Aug 2024

- Analysed bid and vendor data across multiple projects using SQL queries on MySQL by extracting insights to support decision-making and improve bid evaluation efficiency for a team of 10+ project managers.
- Designed and implemented a structured database schema to organise RFQ and vendor records; wrote queries to validate, clean, and retrieve data thereby ensuring accuracy and eliminating duplicate entries.
- Built a reporting interface over the processed data layer, enabling stakeholders to filter and interpret bid outcomes without direct database access thereby improving cross-functional visibility.

Regenboog — Software Engineering Intern Oct 2023 – Mar 2024

- Worked with structured HR datasets such as attendance logs, employee records, and welfare case data across healthcare, education, and social welfare sectors; supported data collection and reporting workflows.
- Parsed and mapped JSON data from backend APIs to application views, ensuring accurate and consistent data presentation for end users across a 6-month project cycle.

PROJECTS

Song Recommendation & Playlist System | Python, Pandas, MySQL

- Ingested and cleaned listening history data from CSV files using Pandas; designed a normalised MySQL database with full CRUD operations and analysed user preferences to generate ranked track recommendations.

Forest Fire Detection System | Python, CNN, Statistical Analysis

- Processed and cleaned large image datasets; applied statistical analysis to evaluate model performance. Trained a CNN classifier achieving high detection accuracy across varied lighting conditions.

NLP Text Summariser | Python, NLP, Data Processing

- Built a data processing pipeline to ingest large text corpora, apply TF-IDF statistical transformations, and extract key insights and effectively summarised information from variable-length documents.

User Question Answering System | Python, ML, Analytics

- Trained an ML model on thousands of structured QA records; performed data cleaning, feature extraction, and validation, delivering accurate automated answers based on statistical pattern recognition.

Quiz Application | Python, MySQL, Reporting

- Developed a full-stack quiz app with a MySQL backend managing user registrations, quiz content, and performance records. Designed score reporting and comparison features for result analysis.

EDUCATION

SSN College of Engineering, Chennai	B.E. Computer Science	2021 – 2025 | CGPA 7.23
Presidency School, Bangalore South	12th CBSE	May 2021 | 92.4%
Presidency School, Bangalore South	10th CBSE	May 2019 | 94.2%

CERTIFICATIONS & ACHIEVEMENTS

- Machine Learning and NLP with Python
- Python Statistics for Data Science
- Ethical Hacking
- Affective Computing
- Model United Nations (MUN) participant
- Dance Club Core-Committee Member | Classical Dancer (Bharatanatyam) | Carnatic Vocalist
